DETAILED ACTION

Election/Restriction

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

- | | |
|-------------|---|
| Invention 1 | Claim(s) 1-8, drawn to a polypeptide having an enzymatic glycosyltransferase activity. |
| Invention 2 | Claim(s) 9-18, drawn to an isolated nucleic acid, expression vector, and host cell. |
| Invention 3 | Claim(s) 19-21, 24, drawn to a method for producing a dextransucrase comprising inserting a nucleic acid into a host cell. |
| Invention 4 | Claim(s) 22, 24, drawn to a method for obtaining a dextransucrase comprising modifying SEQ ID NO: 4 by addition, deletion or mutation. |
| Invention 5 | Claim(s) 23, drawn to a method for obtaining an isolated glycosyltransferase comprising randomly modifying SEQ ID NO: 4 and establishing a library of variations. |
| Invention 6 | Claim(s) 25, drawn to use of a glycosyltransferase in the production of a composition with a prebiotic effect. |
| Invention 7 | Claim(s) 26, drawn to use of glycosyltransferase in the production of a pharmaceutical or cosmetic composition. |

2. The inventions listed as Inventions 1-7 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

A same or corresponding technical feature shared among Inventions 1-7 is a polypeptide having an enzymatic glycosyltransferase activity which is capable of forming dextrans having α (1 \rightarrow 2) linkages. However, this technical feature has already been taught in the prior art by US

Art Unit: 1652

Patent 5,141,858 (Paul et al.).

US Patent 5,141,858 teaches a glucosyltransferase enzyme extracted from *Leuconostoc mesenteroides* NRRL B-1299 which is capable of producing dextran containing α (1 \rightarrow 2) linkages (see entire patent, especially column 2, lines 44-68).

Thus, the same or corresponding technical feature is not special since it was known in the prior art and therefore cannot make a contribution over the prior art. Since Inventions 1-7 lack the same or corresponding special technical feature, then Inventions 1-7 are not so linked as to form a single general inventive concept under PCT Rule 13.1.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christian L Fronda whose telephone number is (571)272-0929.
